

## The Gentle Finishing Touch

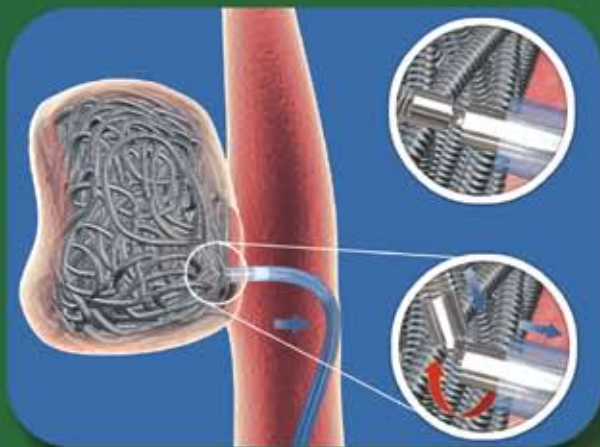

The ULTIPAQ® Microcoil is a soft, stretch-resistant finishing coil designed for atraumatic packing and finishing.

- Entire coil length employs a soft coil wind
- Provides optimal filling of small, hard-to-reach interstices
  - Fills spaces located in the more distal portions of the coil mass
- Enables protective finishing at the aneurysmal neck
  - Choose ULTIPAQ CERECYTE® Coil at the neck
- Stretch-resistant inner member helps prevent coil stretching during positioning

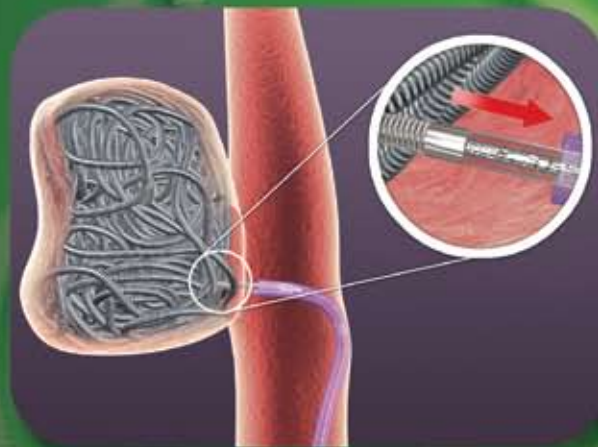

## Get a Whole New Angle on Packing Density

Micrus® Microcoils feature an articulating detachment junction that allows you to go where you could never go before. This unique feature facilitates precise, atraumatic filling and finishing in even the most tightly packed coil masses.

Micrus Articulating Junction  
(Less catheter kickback as forces misalign with articulated junction)

Competitive Coil with Straight Detachment Junction  
(More catheter kickback as forces align with straight junction)
